

CSA0404 - OPERATING SYSTEM

LAB PROGRAMS

Sathish kumar T(192521259)

1. Create a new process by invoking the appropriate system call. Get the process identifier of the currently running process and its respective parent using system calls and display the same using a C program.

```
main.c    Share  Run
```

```
1  #include <stdio.h>
2  #include <unistd.h>
3
4  int main() {
5      pid_t pid = fork();
6
7      if (pid == 0) {
8          printf("Child Process\n");
9          printf("PID = %d\n", getpid());
10         printf("Parent PID = %d\n", getppid());
11     } else {
```

```
main.c    Share  Run
```

```
6
7  if (pid == 0) {
8      printf("Child Process\n");
9      printf("PID = %d\n", getpid());
10     printf("Parent PID = %d\n", getppid());
11 } else {
12     printf("Parent Process\n");
13     printf("PID = %d\n", getpid());
14     printf("Child PID = %d\n", pid);
15 }
16 return 0;
17 }
```

Output

```
Parent Process  
PID = 4960  
Child PID = 4961  
Child Process  
PID = 4961  
Parent PID = 4960
```

```
